Trilithic Launches Webcast Training Sessions *Training convenience for working professionals.*

INDIANAPOLIS (Thursday, February 26, 2009) – Trilithic, Inc. is expanding online resources by hosting regularly scheduled Training Webcasts in the Trilithic Online Training Center. Offered in one hour increments, each webcast provides training and tips on popular topics such as HSD troubleshooting, Home Certification and Ingress Mitigation, and Signal Leakage Analysis.

Through a combination of video, presentations, and interactive question and answer sessions, Trilithic delivers a high-quality virtual training program allowing customers to learn from the comfort of their own chair. These courses are ideal for training employees located in remote or multiple locations, or for a small number of employees who require training but cannot be out of the field for extended periods of time.

Web-based training offers the convenience of learning in the comfort of the office. Making the training convenient increases the opportunity to learn, and increases productivity by minimizing time required for training and making Techs more proficient in their work.

"The turn-out has been tremendous" said Mark Webb, Vice President of Trilithic. "Trilithic is committed to providing more ways for our customers to gain knowledge. It has never been more important to save time and money, and this training method saves significant time and money."

All that is needed to access the courses is Internet access and a standard web browser. The courses are available at www.trilithic.com/training.
