Product Announcement
Trilithic Quickens 860 DSPi Spectrum Analyzer & Reverse Sweep Display:

Indianapolis, IN (Wednesday, June 15, 2005). To improve the ability to capture transient ingress and impulse noise for efficient field troubleshooting, Trilithic has made the update rate faster on the 860 DSPi spectrum analyzer feature and added a dwell setting. Traditionally the spectrum analyzer feature on field meters has been relatively slow, and many technicians resort to carrying a heavier laboratory grade analyzer into the field for troubleshooting. This speed enhancement feature will increase the number of technicians who have the ability to troubleshoot ingress. Additionally, the reverse sweep update rate benefits from this enhancement, making alignment easier. The enhancement is standard on all 860 DSP series analyzers, and is available free as a simple field installable firmware upgrade from the Trilithic web site.

Please join us in demonstrating all the 860 DSPi capabilities including VoIP at the Cable Tec Expo in San Antonio, Texas June 15-17. Trilithic's Booth is # 5066
